

Managing Extremes: Watersheds & Climate Disruption

May 5-7, 2010 in Winston-Salem, NC

Hot Topics

Drought and Flood Issues

Managing User Conflicts

Reservoir Operations

Sediment and Erosion Control

Citizen Monitoring

Stormwater Pond BMPs

Water Supply Issues

Algae Identification Workshop

Watershed &
Lake Associations

The North American Lake Management Society and the North Carolina Lake Management Society invite you to attend the 19th Annual Southeastern Lakes Management Conference to be held in the spring of 2010 in North Carolina. The conference location, Winston-Salem, is centrally located between the Atlantic coast and the Great Smoky Mountains in NC. Join us at the Hawthorne Inn and Conference Center in downtown Winston-Salem May 5-7, 2010 to enjoy the regional attractions and network with others in lake and watershed management as we examine extreme weather and water quality strategies and other lake issues. **Workshops will be held on May 4, 2010.**

Southeastern lakes and reservoirs are a unique and vital resource. Factors such as geography and climate distinguish us from the nation as a whole. Changes in population and downturns in the economy are challenging all stakeholders to be creative in their solutions. Management and protection of southeastern lakes and reservoirs require sound national policy and coordinated action at the local level. The North American Lake Management Society and its Southeastern Chapters are well suited to play an important role in both of these areas.

Objectives

- ◆ To manage extreme weather conditions: water stewardship
- ◆ To explore ways to restore, enhance & preserve while supporting economic growth
- ◆ To exchange ideas on current lake, reservoir and watershed issues in the Southeast
- ◆ To promote local actions on lake, river & watershed issues
- ◆ To facilitate communication among all stakeholders
